S121

The reasonably priced machine for diverse internal grinding applications.

Key data

The S121 is a universal internal cylindrical grinding machine for medium-sized workpieces in individual and small batch production. It has a swing diameter of 400 mm.
The name STUDER stands for more than 100 years of experience in the development and production of precision cylindrical grinding machines. «The Art of Grinding.» is our passion, highest precision is our aim and top Swiss quality is our benchmark.

Our product line includes both standard machines, as well as complex system solutions in high-precision cylindrical grinding for machining small and medium-sized workpieces. In addition we offer software, system integration and a wide range of services. As well as receiving a complete tailormade solution the customer also benefits from our 100 years of know-how in relation to the grinding process.

Our customers include companies from the machine tool industry, automotive engineering, tool and die makers, the aerospace industry, pneumatics/hydraulics, electronics/electrical engineering, medical technology, the watch industry and job order production. They value maximum precision, safety, productivity and longevity. 24 000 manufactured and delivered systems make us the market leader and are clear evidence of our technological leadership in universal, external, internal and noncircular grinding. Around 800 employees, including 75 apprentices, make it their goal every day to ensure that «The Art of Grinding.» will continue to be closely linked to the name STUDER in the future.
If you don’t want to miss out on the latest technology in internal grinding, then take a moment – for the S121. This reasonably priced universal machine can handle a wide range of internal grinding applications. The incomparable STUDER precision is based on the Granitan® machine bed and the StuderGuide® guideway system. During the development of the machine the highest attention was given to the ergonomics, be it in connection with grinding, the machine set-up or with the maintenance of the machine.
Features

### Dimension
- Swing diameter above the table 400 mm
- Max. workpiece length (including clamping device) 300 mm
- Internal grinding length 175 mm
- Maximum workpiece weight 125 kg

### Hardware
- StuderGuide® guide system with linear drive
- Spindle turret with two grinding spindles or one fixed spindle
- C-axis for the workhead enabling form and thread grinding
- Full enclosure with two sliding doors
- Granit® S103 mineral casting machine base
Software

- Very simple operation and programming thanks to StuderWIN
- Short setup and resetting times e.g. with Studer Quick-Set
- Standardized interfaces for loader and peripheral devices

The S121 universal internal cylindrical grinding machine has an exceptional price/performance ratio and is the ideal machine for internal, surface and external grinding of chuck components. It has a host of sophisticated technical features such as the revolutionary StuderGuide® guideway system, high-precision axis drives with linear motors, a swivel-in dressing unit, etc. The S121 is the ideal machine for a wide range of internal grinding applications. Many workpieces are in the areas of machine tools, drive elements, aerospace, die and mold.

Precision is the result of perfect interaction between a large number of different factors. The basis is the Granitan® S103 machine bed with its excellent cushioning and thermal behavior. The modules are ideally suited to each other and produced with the customary STUDER precision. The large distance between the guideways and the very rigidly constructed slides form the basis for the precision and productivity of this machine. All components involved in defining precision are temperature-stabilized.

StuderWIN creates a stable programming environment and contributes to efficient use of the machine. A PC is integrated into the CNC control system. The possibility of fully integrating the in-process gauging and sensor technology for process monitoring as well as contact detection and balancing systems in the control enable standardized programming of the different systems. The drive elements are optimally adapted to the control.
Granitan® S103 mineral casting machine base

The material structure developed by STUDER and which has proved its superb efficiency over many years is produced in the company’s own plant using the most modern industrial techniques. The excellent cushioning behavior of the machine base ensures outstanding surface quality of the ground workpieces. The service life of the grinding wheel is also increased, leading to reduced downtimes. Temporary temperature fluctuations are extensively compensated by the favorable thermal behavior of Granitan®. This provides high stability throughout the day. The Studer-Guide® guide system for the longitudinal slide is formed directly in the machine bed and coated with Granitan® S200 wear-resistant guideway surfacing material. The guideways offer the highest possible accuracy through the entire speed range with high load capacity and cushioning levels. Thanks to the robust and maintenance-free design, these excellent guideway characteristics are more or less completely retained.

• Vibration damping
• Thermally stable
• Non-wearing

Machine bed made from gray cast iron
Machine bed made from Granitan®

1 Machine bed with longitudinal guides
2 Vibration behavior of gray cast iron and Granitan® S103
StuderGuide® in the longitudinal and transverse axis

The StuderGuide® guide system for the X and Z axis is coated with Granitan® S200 wear-resistant guideway surfacing material and offers the highest possible accuracy through the entire speed range with high load capacity and cushioning levels. StuderGuide® extends the benefits of hydrostatic systems and guideways with a patented surface structure. A big advantage of StuderGuide® in comparison with hydrostatic guides is the cushioning component in the direction of motion. The slides are powered by linear motors with direct measuring systems with a resolution of 10 nanometers. The maximum travel speed is 20 m/min for both axes. This provides the basis for high-precision and efficient grinding with the shortest possible auxiliary times. The combination of StuderGuide®, linear motors and direct measuring systems guarantee the highest possible interpolation accuracies.

1. Machine base with longitudinal and cross slides
2. Z-axis with linear motor

- High geometrical traversing accuracy
- Effective covering of the guideways
The S121 can be configured with a fixed spindle or a spindle turret with two spindles. The spindle turret swivels hydraulically through 180° to a stop. One spindle can be equipped with an external grinding wheel.
Workhead

The workhead is adjustably mounted on the workpiece table. The driving power is 1.6 kW, and the load for live spindle grinding is maximum 300 Nm. It also features manual cylindricity correction. The high-resolution C-axis with direct measuring system is ideally suited for form and thread grinding. The machine concept allows optimal accessibility for the operator, whether for workpiece changeover, dressing or grinding wheel change.

- Movable workhead
- Cylindricity correction
- Good ergonomics

1 Workhead
2 Cylindricity correction
An easy-cutting grinding wheel is essential for cost-effective and high-quality grinding. Rotating and fixed dressing tools can be mounted on the pivoting dressing unit. This makes it possible to coordinate the dressing process flexibly and optimally with the characteristics specific to the workpiece, tool or materials. The grinding wheel profile and dressing parameters are easily defined via macros. Another STUDER speciality is the grinding wheel reference points (T-numbers). This enables programming with normal dimensions, which considerably facilitates the development of grinding programs. A software package is available to fine tune the dressing process and includes additional dressing functions.

- Configurable according to clients' requirements
- Rotating or stationary dressing tools can be used
Control system and operation

The S121 is equipped with a 31i-B series Fanuc control unit with integrated PC. The 15” touch screen facilitates intuitive operation and programming of the machine. All controls are clearly and ergonomically arranged. An important role is played by the manual control unit, which facilitates setup close to the grinding process. A special function – the Sensitron electronic contact detection device – reduces downtimes to a minimum.
The StuderWIN operator interface creates a stable programming environment and contributes to efficient use of the machine. The possibility of fully integrating the in-process gauging and sensor technology for process control as well as contact detection and automatic balancing systems in the operator interface enables standardized programming of the different systems. The drive elements are optimally adapted to the control.

The sophisticated mechanical engineering concept of the S141 is completed by a grinding software program developed in-house by STUDER and which is continuously further optimized in collaboration with users of the software. This software offers:

- **StuderPictogramming**: The operator strings the individual grinding cycles together – the control unit generates the ISO code.
- **STUDER Quick-Set**: The software for grinding wheel alignment reduces resetting times by up to 90%.
- **Microfunctions**: Free programming of grinding and dressing process sequences for optimization of the grinding process.
- **Integrated operating instructions**: assist safe machine operation.
- The software options for grinding technology calculation, optimized dressing as well as contour, thread and form grinding additionally increase the machine's functionality.
STUDER cylindrical grinding machines should fulfill the customer’s requirements for as long as possible, work cost-effectively, function reliably and be available at all times. From «start up» through to «retrofit» – our Customer Care is there for you throughout the working life of your machine. 30 professional helplines and more than 60 service technicians are available in your area, wherever you are in the world.

- We will provide you with fast, uncomplicated support.
- We will help to increase your productivity.
- We work professionally, reliably and transparently.
- We will provide a professional solution to your problems.

Installation plans

The information given is based on the technical levels of our machine at the time of this brochure going to print. We reserve the right to further develop our machines technically and make design modifications. This means that the dimensions, weights, colours, etc. of the machines supplied can differ. The diverse application possibilities of our machines depend on the technical equipment specifically requested by our customers. The equipment specifically agreed with the customer is therefore exclusively definitive for the equipping of the machines, and not any general data, information or illustrations.
